

Airport uses 1mwh outdoor telecom enclosure in san diego

Overview

What is an outdoor telecommunication enclosure?

Damage-resistant and reliable outdoor enclosures are key for outdoor telecommunication applications from cell tower sites and fiber optic networks to substations. These specialized cabinets house and protect sensitive equipment like routers, switches, and other network devices.

Does San Diego International Airport have a battery energy storage system?

San Diego International Airport (SAN) is the first airport in the United States to install an ENGIE Storage battery energy storage system. Both ENGIE and SAN are members of Cleantech San Diego. The 2 MW/4 MWh GridSynergy® energy storage system furthers the airport's long-term commitment to efficiency and sustainability.

Why is energy storage important for San Diego International Airport?

"The San Diego International Airport is taking significant steps to reduce their carbon footprint and energy storage is playing an important role in their success," said Christopher Tilley, chief executive officer at ENGIE Storage.

How will San Francisco's new energy storage system work?

Paired with the airport's existing photovoltaic solar system, the new energy storage system will reduce energy charges during peak demand which equate to approximately 40 percent of the airport's monthly electricity costs. The system is expected to begin operation in early 2020. SAN is widely regarded as a leader for its sustainability efforts.
