

Comparison of IP55 network cabinet footprint in hotels

Overview

What is an IP55 rating in outdoor cabinets?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water.

What is the IP rating on a cabinet?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water. The IP55 marking includes two digits that determine the nature and intensity of the enclosure's protection against external influences.

What is an IP55 rating?

The IP rating defines the level of protection against dust and water intrusion in electrical devices, ensuring their optimal operation in various environments. The IP55 rating offers an ideal balance between dust and water resistance.

What is IP55 & how does it work?

Let's quickly explain what they mean and how they differ. What is IP55?

IP55 is simply an IP (Ingress Protection) rating that indicates a fair protection from water and dust. The first digit "5" means that there could be limited dust but it won't affect the functionality of that equipment or device.
