

Vilnius new energy small cabinet mei station

Overview

Why does Lithuania need reliable energy storage?

Uloza pointed to the growing demand for reliable energy storage as Lithuania's renewable energy sector expands.

What is E-Energija group's Vilnius Bess?

The Vilnius BESS is designed to address these dynamics, ensuring a reliable energy supply for consumers. E-energija Group's initiative reflects a practical approach to integrating renewable energy into Lithuania's grid, with the system set to play a vital role in balancing supply and demand once operational.

What is the Vilnius Bess?

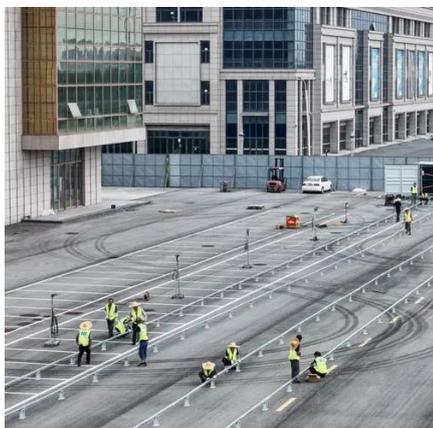

The Vilnius BESS will incorporate a NordNest smart energy management system, equipped with key control and communication functions to optimize performance. This technology aims to support the stability of the national grid by storing excess energy generated from solar and wind power plants, then releasing it when demand rises.

How much electricity does Lithuania use?

Although the average electricity consumption in Lithuania is around 1500 megawatts, the installed capacity of both solar and wind power plants is expected to exceed 2000 megawatts in 2025, enabling surplus electricity to be stored and supplied to consumers during peak hours."
